

Carriage Rollers

Carriage Roller - Specially designed bearings referred to as carriage rollers are regularly seen on lift masts since they allow them to operate better in tough environmental surroundings. The conventional lift mast is often subject to frequent oscillations, shocks, high dynamics and static loads and vibrations. This apparatus is frequently exposed to environmental influences like for instance dust, cold, heat, contamination, aggressive ambient air and moisture. Hence, the lift masts' guidance arrangements have to be specifically tough and have a specific high load carrying capability.

So as to help compete in many different environmental conditions, [Yale parts](#) carriage rollers were designed for numerous lift masts. While having the ability to deal with a specifically high load carrying capacity, these bearings provided an economical operational security for the lift masts' guidance arrangements.
